

## Quality Policy

Bendworx-Steelpro provides specialist brake pressing, plate rolling, section rolling & bending, steel processing, and pipe & steel casing manufacture services to Australian and international clients of all sizes.

We understand that our reputation, and therefore our success and the success of our clients, depends on the quality of our work. It is our policy to provide goods and services to our clients to, or exceeding, their expectations and any required standards, in accordance with agreed delivery times, conditions, and price.

All Directors, Management, and Staff throughout the company are individually and collectively responsible for Quality Control through our Quality Management System (QMS) which is designed to meet or exceed the requirements of ISO 9001. Our QMS is subject to constant measurement and review in order that we continually improve, with suppliers and sub-contractors strongly encouraged to co-operate.

This Quality Policy defines our guiding principles in pursuit of our vision of being the market leader in steel processing solutions.

Wayne Fogden
